

Ramshorn Hook

If thick wire or fibre ropes (slings) or thick, large Master links do not fit in the normal single hooks (crane hook), the new CondorLift ramshorn hook offers the following advantages:

- Specially suitable to handle heavy load with synthetic belts or slings
- Greatest possible safety due to drop forged shape with rounded edges manufactured from high strength material
- Uniform load distribution with multistrand slings thanks to pivoting effect
- Rounded support surfaces for optimal placement of textile slings
- 2 forged safety latches with ergonomically formed finger recess. Safety latch engages in the hook tip and thus is protected against lateral bending.

From single to double hook: Ramshorn hooks

Forged version
1 t / 3.2 t / 6.4 t

Load:

angle 0°-30° = 100% WLL
30°-45° = 70% WLL

Attention:

The load specifications are valid at equal load distribution to both hooks. A single-sided (one hook aperture) load distribution is prohibited.
